

SedonaOffice Minor Update Notification

Version 5.6 Build 91

Now available through the normal means: “Start / All Programs / Sedona Office / SedonaOffice Client Tools / Check For Updates”

Full release notes for v5.6 available

here: <http://www.sedonaoffice.com/ReleaseNotice.html>

As of build 83 SedonaOffice contains new system requirements to use SedonaDocuments, all workstations and servers require the Microsoft C++ 2010 runtimes (included as part of the update).

C++ 2010 is only compatible with the following Operating Systems:

- Windows 7
- Windows Vista Service Pack 2 (SP2) or later (all editions except Starter Edition)
- Windows XP with Service Pack 3 (SP3) (all editions except Starter Edition)
- Windows Server 2008 R2 or later (all editions)
- Windows Server 2008 Service Pack 2 (SP2) or later
- Windows Server 2003 R2 or later (all editions)
- Windows Server 2003 Service Pack 2 (SP2) or later (all editions)

If your workstations or servers do not meet these minimum requirements you will need to update the operating systems before attempting to run this update.

Installation of the C++ 2010 runtimes may require 'Administrator' access on some workstations. If your network policies prevent users from installing the runtimes, we suggest you download and

install them manually.

<http://www.microsoft.com/download/en/details.aspx?id=5555> (x64 based operating systems only require the x86 runtimes)

Build 91:

- Fix: Service Module – When a Billing Item does not include tax it would cause a crash
- Fix: Service Module – When a Miscellaneous Appointment has data errors would cause a crash
- Enhancement: Bridgestone Export enhanced to a new wizard with support for additional formatting options and support for the 1.8 export format. If you use Bridgestone for invoice or statement mailing please contact Bridgestone and notify them that you have updated to the 1.8 file format.
- Fix: RMR-at-Risk Report – corrected problem where large number of branches leaves little room for report information. Report criteria has been moved to print once at the end of the report.
- Change: A change was made to issuing parts for a job. If an inventory physical is in process, the issue will be allowed if the issue date is beyond the lock down of the warehouse in the physical count.
- Fix: Corrected a problem in the WeSuite import where importing a job for an existing customer and creating a new site would sometimes error.
- Enhancement: Added validation of the job closing process when a job has accrued income to be recognized at job close.
- Fix: Closed up a potential accounting problem where reopening an existing parts receipt or bill on a closed job, would potentially change the WIP accounts used on the original transaction to an income account.

- Fix: Corrected a problem in Inventory where issuing parts to a service ticket from a warehouse not assigned to one of the service technicians, would remove the part from inventory but NOT place the part on the service ticket if it did not exist there.
- Fix: Service Module – Fixed a combination of clicking that could cause the Queue Setting to be lost.
- Fix: Job Ticket: Corrected comments and inspection notes truncating text in the System information of the job ticket.

If you have not yet updated to 5.6 we HIGHLY recommend reviewing the documentation prior to updating your installation from 5.5 as this update contains numerous application changes.

Additional information and reference guides on the new service module can be found

here: <http://www.sedonaoffice.com/Training%20Guides.html>

No other SedonaOffice modules are affected by this update unless otherwise noted in the release documentation.

Direct download link, if required (please use the Auto Update system unless absolutely necessary):
